PREFACE

This compilation was prepared using selected commodities and activities to show the importance which ASCS programs may have to members of Congress, and to insure the timely and direct dissemination of relative data to such members. The latest available data were used to indicate the numerical ranking of selected commodities and programs by Congressional District and State, as well as the Representative's name, political party affiliation, and unit statistics.

Factors used for ranking purposes differ according to the various commodities or activities. When the same county is in two or more Congressional Districts, data for that county in total is credited to each district.

In using this publication, care should be taken to note criteria used for ranking, that is, normal crop acreage, number of farms, poundage, etc. The criterion is identified at the top of each page for each commodity and activity. State rankings were used for those commodities where county data were not available in all districts.
